

Australian Large Company Trust

THE AUSTRALIAN LARGE COMPANY TRUST AIMS TO PROVIDE LONG-TERM CAPITAL GROWTH THROUGH ACCESS TO THE RETURNS OF LARGE COMPANIES.

BENEFIT SUMMARY

- Provides consistent access to large company returns
- Offers the benefits of an index approach without the costs
- Long-term, aims to outperform the S&P/ASX 100 Index after tax
- Employs patient, low-cost and tax-aware trading

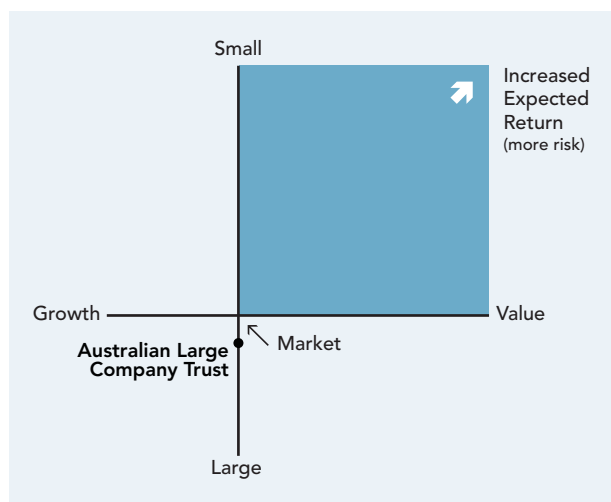

WHAT'S THE THINKING BEHIND IT?

In designing its equity strategies, Dimensional focuses on capturing as efficiently as possible the three known risk factors:

- 1. Market risk** Stocks have higher expected returns than fixed interest.
- 2. Size risk** Small company stocks have higher expected returns than large company stocks.
- 3. Price risk** Lower-priced 'value' stocks have higher expected returns than higher-priced 'growth' stocks.

The Australian Large Company Trust provides efficient, low-cost exposure to the 'market' risk factor. While not strictly limited to its constituents, the Trust is broadly based on stocks in the S&P/ASX 100 Index, a proxy for the market that makes up the lion's share of overall market cap.

Dimensional aims to add value over the index in the long term through careful, patient trading and astute tax management. By not having to match the index exactly, it can focus on these efficient execution strategies.

HOW IS THE PORTFOLIO CONSTRUCTED?

The quantitative design of the Australian Large Company Trust aims to ensure that it captures the returns of large companies both precisely and reliably. A qualitative overlay provides flexibility in implementation.

The portfolio's eligible universe includes all Australian-listed securities in the S&P/ASX 100 Index.

The Trust generally will invest in companies in a similar proportion to their weight in the index. However, to manage turnover and taxation considerations, the Trust may not exactly match specific company weights. The Trust also may invest in companies not included in the index. A patient trading style, with an emphasis on controlling transaction costs rather than on speed of execution, helps the Trust achieve its performance objective.

Dimensional also uses qualitative filters that remove from consideration stocks that have risk characteristics other than those being targeted. For example, the strategy may filter out companies under takeover, in the process of merging and stocks that have negative news stories associated with them.

HOW IS THE PORTFOLIO IMPLEMENTED?

Unlike a traditional index fund, the Trust is not obliged to trade stocks as they enter and exit the S&P/ASX 100 Index. This allows Dimensional to practise patient trading, focusing on price rather than time of execution, which can mitigate the effects of momentum and lead to lower trading costs.

By allowing variations from target weights, Dimensional can also take advantage of favourable trading opportunities and minimise transaction costs.

(continued ...)

Tax management is another key feature of this portfolio. Dimensional seeks to maximise after-tax returns. It does this by managing the Trust in a way that aims to defer the realisation of net capital gains where possible and to manage dividend income.

ROLE IN A PORTFOLIO

The Australian Large Company Trust is designed to act as a core component of an Australian equity portfolio. It is constructed in a way that aims to prevent it drifting from its position on the style map. This is so it can consistently deliver large company returns.

TRUST FEATURES

OBJECTIVE	To provide long-term capital growth through access to the returns of large companies.
GEOGRAPHIC COVERAGE	Australia
INDIRECT COST RATIO (ICR)	0.25% (actual ICR for year ended 30 June 2009)
INCOME DISTRIBUTION	Half-yearly (end of June and December)

The Trust's product disclosure statement contains more complete information on risks, advisory fees, distribution charges and other expenses.
